Patient centered care is our primary goal at the MVZ-Westpfalz in Landstuhl

In our highly qualified team of ear, nose and throat specialists, surgeons and anesthesiologists, practically the entire spectrum of diagnostics and therapy are covered. The clinic is equipped with the most modern technology. We also have our own surgery center and an inpatient sleep lab with two beds. The surgery center features four operating rooms and a 17-bed ward with single, double, and family rooms. MVZ Westpfalz patients can also receive inpatient treatment and surgery from MVZ Westpfalz doctors while staying at St. Johannis Hospital in Landstuhl.
Dear Patient,

Your health is our top priority. That is why our medical center offers excellent medicine in a private and caring atmosphere. Our team of highly qualified doctors, nurses and medical staff are available to give you the best care. Our clinic is equipped with the latest technology and at the same time is as comfortable as a hotel. We want you to feel comfortable at our clinic, because harmony between the internal and the external is the key to your quick recovery.

We are here for you.

In addition to basic medical care in the field of ENT, we offer many other treatment methods and services. Our practice's primarily focus is in the areas of ENT, plastic surgery, the treatment of sleep disorders, all forms of microscopic reconstructive surgery of the middle ear and allergy-induced respiratory problems. Some additional focuses are voice and speech therapy, the diagnosis of tinnitus, hearing problems, and vertigo.

Our outpatient and inpatient surgery clinic also offers a wide range of surgical and vascular procedures. In addition to general surgery, hand and accident surgery, we also perform endoscopic, vascular surgery and colorectal procedures in our clinic. Our highly qualified team of surgeons and vascular surgeons can competently answer any questions you may have about treatment methods in outpatient and inpatient surgical procedures, and is also available for a wide range of non-surgical services during special office hours. The surgery center features four operating rooms and a ward with 17 beds. A wide range of outpatient and inpatient surgical procedures are performed here every day. Our medical center is equipped with an accredited sleep lab with two inpatient beds as well as four outpatient screening devices.
ENT Clinic
We are always willing to listen

One of our most important organs is the ear. Not only does the ear perceive and receive acoustic stimuli, but chronic ringing in the ears, hearing loss, pain or our sense of balance, which can be influenced by diseases of the ear, can severely affect a patient’s mental state.

The nose is another important sensory organ. A defect can result in no longer being able to smell the things around us, but is also frequently responsible for serious secondary diseases. With the latest diagnostic techniques and an experienced team of specialists, we care about the health of all your senses.

Our services

- ENT surgery
- Allergy Test / Assessment
- Sleep medicine (the diagnosis and treatment of sleep-related respiratory disorders)
- Laser surgery
- Cosmetic and plastic surgery
- Sonography/ultrasound
- Phoniatics and pediatric audiology
- Testing for smell and taste disorders
- Hearing and balance testing
- Pediatric audiometry
- Digital volume tomography
Patients can be treated in five ENT Evaluation Rooms featuring state-of-the-art equipment. In addition to basic medical care in the field of ENT, we offer many other treatment methods and services. The focuses of our practice are in the areas of head and neck surgery and plastic surgery, the treatment of sleep disorders, and allergy-induced respiratory problems.

Some additional focuses include voice and speech therapy and the diagnosis of tinnitus, hearing problems and vertigo.

Surgical spectrum

- Functional surgery of the nose and sinuses (endoscopic, microscopic, laser-assisted)
- Cosmetic and plastic surgery on the head and neck and facial cosmetic surgery (e.g., nose and ear reshaping, eyelid reshaping, face lifts)
- Ear surgery (or infections and improvement of hearing, eardrums, ossicles, stapes, otosclerosis)
- Middle ear microsurgery
- Laser surgery
- Salivary gland surgery
- All standard ENT surgical procedures (removal of tonsils and adenoids)…
- Head and neck surgery
- Endoscopic and microscopic procedures on the larynx

Landstuhl staff:  Dr. Antonio Baker Schreyer  |  Dr. Nicolas Hammerschmitt  |  Dr. Ulrich Jantzen  |  Dr. Bettina Lüer-Groel

Pirmasens staff:  Dr. Harald Müller  |  Dr. Wolfram Golze  |  Dr. Peter Forster
Outpatient and Inpatient Surgery Care Center
Quality work with a delicate touch

Many surgical procedures that used to require a hospital stay can now be performed on an outpatient basis with the same level of safety. Minimal incisions are often sufficient for experienced hands to surgically correct health problems accurately and effectively. The individual is always the focus of the treatment, and will be thoroughly informed, advised and personally cared for. We want to put you at ease in an atmosphere of confidence and competence.

Here are just a few of the many services we offer:

- **General surgical procedures:**
  Soft tissue surgery, thyroid gland surgery, hernia and abdominal wall surgery, skin tumors, etc.

- **Hand surgery including nerve compression syndrome:**
  Carpal tunnel syndrome, cubital tunnel syndrome, Dupuytren’s contracture, tennis elbow, ganglion cyst removal, etc.

- **Trauma surgery:**
  Closed Reduction of simple fractures, osteosynthesis, hardware removal, etc.

- **Minimally invasive endoscopic procedures:**
  Gallbladder removal (cholecystectomies), appendectomy, treatment of inguinal, femoral, umbilical and incision hernias, surgical removal of adhesions, etc.

- **Vascular surgery:**
  Varicose vein surgery, radio frequency and laser therapy for varicose and spider veins, arterial interventions, carotid artery surgery, port implantation, shunt surgery, implantation of dialysis catheters, etc.

- **Colorectal surgery:**
  Hemorrhoids, fistulas, fissures, skin tags, abscesses, etc.,

- **Other procedures:**
  Vasectomy (male sterilization), gynecomasty (male breast reduction), phimosis (tight foreskin)
Non-surgical treatments:

- First aid/emergency and initial treatment of all disorders of the musculoskeletal system, abdomen, and chest that may require surgery
- Injuries resulting from sport and leisure activities
- Bone fractures in adults and children including cast treatment
- Treatment of acute and chronic diseases of the skeletal and musculoskeletal system
- X-ray diagnostics of the skeletal, musculoskeletal system
- Treatment of acute and chronic diseases of the abdomen and abdominal wall
- Abdominal and thyroid gland ultrasound
- Vascular diagnostics (Doppler, color-coded Duplex sonography, treadmill exercise tests)
- Vascular checks (stroke prevention, intima media thickness measurement, early detection of peripheral arterial occlusive disease (pAOD))
- Physical Therapy

- Child and Adolescent Psychiatry
- Urgent Care Center
- Occupational Therapy
- Chiropractic Medicine
- Physical Therapy
- Hearing Clinic
- Vital Apotheke (Pharmacy)
- Speech Therapy
Children as Patients

Children can understand and deal with their illnesses. The problem is that many parents and doctors don’t think they can!

In our practice, we take the children just as seriously as adults.

It is pretty amazing how many children are already aware of their illness, and the more often they are sick, the more they know.

And yet we as doctors (and sometimes their parents) often push the child to the side when discussing their illness. Of course doctors talk to their younger patients, but often their conversation is limited to generic sentences such as “How are you feeling?” or “Wow, that’s a very cute teddy bear.” As soon as the conversation turns to procedures and treatment, the adults prefer to talk amongst themselves.

Various studies have shown how younger patients feel in these situations; not even 10% of the children are confident enough to ask questions. They often have the feeling that they would be interrupting. For this reason, we make it a point to explain the diagnosis and treatment to the children in an age-appropriate manner using pictures and lots of examples. Children need to feel safe and secure!

Many children are afraid of doctors. That is primarily because they often feel helpless in the situation and don’t know what to expect. Don’t conceal what is going to happen from your child. Don’t tell them the shot won’t hurt even though you know that the child will feel some discomfort, even if it is usually just a small pinprick. On the other hand, please don’t warn them too realistically, such as “now, this is really going to hurt” because that would only make them more afraid.
